

Single name

Schema: EAC-CPF 2.0

Context: Encoding a single name, if necessary with multiple name parts.

Description: Use a single `<nameEntry>` element within `<identity>` to enter a single name for an entity. Add attributes to define the names language, status, designation for display or other properties.

Use the element `<part>` to distinguish between parts of a name, if necessary.

Use the element `<useDates>` to indicate the dates the name was used.

Use several elements `<nameEntry>` within `<identity>` when an entity used different names over time.

Examples

```
<nameEntry languageOfElement="de" preferredForm="true"
status="authorized">
  <part localType="surname">Arendt</part>
  <part localType="firstname">Hannah</part>
</nameEntry>
```

```
<nameEntry status="authorized">
  <part>Technical Subcommittee for Encoded Archival Standards</part>
  <useDates>
    <dateRange>
      <fromDate>2015</fromDate>
      <toDate status="ongoing"/>
    </dateRange>
  </useDates>
</nameEntry>
```

```
<nameEntry>
  <part>Noel family, Earls of Gainsborough</part>
</nameEntry>
```
