

Default entity types

Schema: EAC-CPF 2.0

Context: Encoding the type of agent being described in an EAC-CPF instance

Description: Following the chapter 5.1.1 Type of entity in the International Standard Archival Authority Record for Corporate Bodies, Persons, and Families (ISAAR-CPF), EAC-CPF includes the element `<entityType>` within the `<identity>` section to define whether the entity being described is an organization of some kind, a person, or a family. Meant to provide a standardized anchor supporting interoperability across variations of local applications of EAC-CPF, `<entityType>` itself cannot have text, but requires the attribute `@value` to be used with either "corporateBody", or "person", or "family". These three types are designed to be mutually exclusive, so that `<entityType>` also cannot be repeated.

Examples

```
<identity>
  <entityType value="corporateBody"/>
  <nameEntry status="authorized" languageOfElement="de">
    <part>ICARus – Internationales Zentrum für Archivforschung</part>
  </nameEntry>
  <nameEntry status="authorized" languageOfElement="en-gb">
    <part>ICARus – International Centre for Archival Research</part>
  </nameEntry>
</identity>
```
