

# Relation to a function

---

**Schema:** EAC-CPF 2.0

**Context:** Describe the relationship between the entity described and a function.

**Description:** Use the wrapper element `<relation>` to include all information about the related function and the character of the relation. Use the required child element `<targetEntity>` to provide a name or title of the related function. Use the optional child element `<relationType>` to specify the type of relation. Use the optional child element `<targetRole>` to specify the role of the related entity. Use `<date>`, `<dateRange>`, or `<dateSet>` for specifying the time period of the relationship and `<place>` for relevant location information. `<descriptiveNote>` may be included for more detailed specifications or explanations of the relationship.

If needed, use `<objectXMLWrap>` to embed XML documenting the related entity from any (or no) namespace.
